17'4" Herreshoff pulling boat featured in Building Classic Small Craft Vol 2, by John Gardner.

Skin on Frame building technique with solid pine bottom, steam bent ash ribs and stringers copper riveted.

Interior set up for single fixed seat rower with foot braces and single set of oar locks.

Covered with heat shrink ballistic 8oz nylon and coated with a flexible filler to allow a translucent skin.

Aluminum fixed skeg provides excellent tracking.

Material is amazingly tough and condition is excellent.

Also have an attachment that fits in my 2" receiver hitch on a Subaru Forester that allows the boat to be transported locally to launch sites (with tailgate open) and avoids the need for a trailer or lifting onto the roof. Estimate the boat weighs 90-100lbs.

Asking \$500 to cover materials, but a happy home and interested new owner more important than price. Selling to make room for a larger SOF pulling boat (grandchildren!!)
